

BIRD BEAKS

Birds have different beaks to collect different foods.
Check off the type of food that each bird eats.

Bird Beaks

Birds have adapted in order to help them find food. Different birds have **beaks** that are shaped in ways that are specific to the **type of foods** they eat.

Look at the pictures and try to match the **bird beak** to the type of **food** that bird would eat.

Bird Beaks and Food - Matching

LS1.A: All organisms have external parts. Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water and air.

Match each bird's beak to the food it was designed to eat.
